

Contents

Preface xiii

1 An Overview and Brief History of Feedback Control 1

- A Perspective on Feedback Control 1
- Chapter Overview 2
- 1.1 A Simple Feedback System 3
- 1.2 A First Analysis of Feedback 6
- 1.3 A Brief History 9
- 1.4 An Overview of the Book 14
- Summary 16
- Review Questions 16
- Problems 17

2 Dynamic Models 20

- A Perspective on Dynamic Models 20
- Chapter Overview 21
- 2.1 Dynamics of Mechanical Systems 21
 - 2.1.1 Translational Motion 21
 - 2.1.2 Rotational Motion 27
 - 2.1.3 Combined Rotation and Translation 36
 - 2.1.4 Distributed Parameter Systems 38
 - 2.1.5 Summary: Developing Equations of Motion for Rigid Bodies 40
- 2.2 Models of Electric Circuits 41
- 2.3 Models of Electromechanical Systems 45
- △ 2.4 Heat and Fluid-Flow Models 50
 - 2.4.1 Heat Flow 50
 - 2.4.2 Incompressible Fluid Flow 54
- 2.5 Historical Perspective 60
- Summary 62
- Review Questions 63
- Problems 64

3 Dynamic Response 74

- A Perspective on System Response 74
- Chapter Overview 75
- 3.1 Review of Laplace Transforms 75
 - 3.1.1 Response by Convolution 75
 - 3.1.2 Transfer Functions and Frequency Response 80
 - 3.1.3 The \mathcal{L}_- Laplace Transform 87
 - 3.1.4 Properties of Laplace Transforms 89

3.1.5	Inverse Laplace Transform by Partial-Fraction Expansion	91
3.1.6	The Final Value Theorem	93
3.1.7	Using Laplace Transforms to Solve Problems	94
3.1.8	Poles and Zeros	96
3.1.9	Linear System Analysis Using MATLAB	97
3.2	System Modeling Diagrams	102
3.2.1	The Block Diagram	102
3.2.2	Block Diagram Reduction Using MATLAB	107
3.3	Effect of Pole Locations	108
3.4	Time-Domain Specifications	116
3.4.1	Rise Time	116
3.4.2	Overshoot and Peak Time	117
3.4.3	Settling Time	118
3.5	Effects of Zeros and Additional Poles	120
3.6	Stability	130
3.6.1	Bounded Input–Bounded Output Stability	130
3.6.2	Stability of LTI Systems	131
3.6.3	Routh’s Stability Criterion	132
△ 3.7	Obtaining Models from Experimental Data	140
3.7.1	Models from Transient-Response Data	142
3.7.2	Models from Other Data	146
△ 3.8	Amplitude and Time Scaling	147
3.8.1	Amplitude Scaling	147
3.8.2	Time Scaling	148
3.9	Historical Perspective	149
	Summary	150
	Review Questions	151
	Problems	152

4 A First Analysis of Feedback 170

	A Perspective on the Analysis of Feedback	170
	Chapter Overview	171
4.1	The Basic Equations of Control	171
4.1.1	Stability	173
4.1.2	Tracking	174
4.1.3	Regulation	174
4.1.4	Sensitivity	175
4.2	Control of Steady-State Error to Polynomial Inputs: System Type	178
4.2.1	System Type for Tracking	179
4.2.2	System Type for Regulation and Disturbance Rejection	183
4.3	The Three-Term Controller: PID Control	186
4.3.1	Proportional Control (P)	187
4.3.2	Proportional Plus Integral Control (PI)	187
4.3.3	PID Control	188
4.3.4	Ziegler–Nichols Tuning of the PID Controller	192
4.4	Introduction to Digital Control	198

- 4.5 Historical Perspective 203
 - Summary 205
 - Review Questions 206
 - Problems 207

5 The Root-Locus Design Method 220

- A Perspective on the Root-Locus Design Method 220
- Chapter Overview 221
- 5.1 Root Locus of a Basic Feedback System 221
- 5.2 Guidelines for Determining a Root Locus 226
 - 5.2.1 Rules for Plotting a Positive (180°) Root Locus 228
 - 5.2.2 Summary of the Rules for Determining a Root Locus 233
 - 5.2.3 Selecting the Parameter Value 234
- 5.3 Selected Illustrative Root Loci 236
- 5.4 Design Using Dynamic Compensation 248
 - 5.4.1 Design Using Lead Compensation 249
 - 5.4.2 Design Using Lag Compensation 254
 - 5.4.3 Design Using Notch Compensation 255
 - 5.4.4 Analog and Digital Implementations 257
- 5.5 A Design Example Using the Root Locus 260
- 5.6 Extensions of the Root-Locus Method 266
 - 5.6.1 Rules for Plotting a Negative (0°) Root Locus 266
 - △ 5.6.2 Consideration of Two Parameters 270
 - △ 5.6.3 Time Delay 272
- 5.7 Historical Perspective 274
 - Summary 276
 - Review Questions 278
 - Problems 278

6 The Frequency-Response Design Method 296

- A Perspective on the Frequency-Response Design Method 296
- Chapter Overview 297
- 6.1 Frequency Response 297
 - 6.1.1 Bode Plot Techniques 304
 - 6.1.2 Steady-State Errors 315
- 6.2 Neutral Stability 317
- 6.3 The Nyquist Stability Criterion 319
 - 6.3.1 The Argument Principle 320
 - 6.3.2 Application to Control Design 321
- 6.4 Stability Margins 334
- 6.5 Bode's Gain-Phase Relationship 341
- 6.6 Closed-Loop Frequency Response 346
- 6.7 Compensation 347
 - 6.7.1 PD Compensation 348
 - 6.7.2 Lead Compensation 348

	6.7.3	PI Compensation	360
	6.7.4	Lag Compensation	360
	6.7.5	PID Compensation	365
	6.7.6	Design Considerations	371
△	6.7.7	Specifications in Terms of the Sensitivity Function	373
△	6.7.8	Limitations on Design in Terms of the Sensitivity Function	377
△	6.8	Time Delay	381
△	6.9	Alternative Presentation of Data	382
	6.9.1	Nichols Chart	382
	6.10	Historical Perspective	386
		Summary	386
		Review Questions	388
		Problems	389

7 State-Space Design 413

		A Perspective on State-Space Design	413
		Chapter Overview	413
	7.1	Advantages of State-Space	414
	7.2	System Description in State-Space	416
	7.3	Block Diagrams and State-Space	421
	7.3.1	Time and Amplitude Scaling in State-Space	424
	7.4	Analysis of the State Equations	425
	7.4.1	Block Diagrams and Canonical Forms	425
	7.4.2	Dynamic Response from the State Equations	436
	7.5	Control-Law Design for Full-State Feedback	442
	7.5.1	Finding the Control Law	443
	7.5.2	Introducing the Reference Input with Full-State Feedback	451
	7.6	Selection of Pole Locations for Good Design	455
	7.6.1	Dominant Second-Order Poles	456
	7.6.2	Symmetric Root Locus (SRL)	457
	7.6.3	Comments on the Methods	466
	7.7	Estimator Design	466
	7.7.1	Full-Order Estimators	466
	7.7.2	Reduced-Order Estimators	472
	7.7.3	Estimator Pole Selection	476
	7.8	Compensator Design: Combined Control Law and Estimator	478
	7.9	Introduction of the Reference Input with the Estimator	491
	7.9.1	A General Structure for the Reference Input	492
	7.9.2	Selecting the Gain	501
	7.10	Integral Control and Robust Tracking	502
	7.10.1	Integral Control	503
△	7.10.2	Robust Tracking Control: The Error-Space Approach	505
△	7.10.3	The Extended Estimator	516
△	7.11	Loop Transfer Recovery (LTR)	519

- △ 7.12 Direct Design with Rational Transfer Functions 524
- △ 7.13 Design for Systems with Pure Time Delay 527
- 7.14 Historical Perspective 530
 - Summary 533
 - Review Questions 534
 - Problems 536

8 Digital Control 558

- A Perspective on Digital Control 558
- Chapter Overview 559
- 8.1 Digitization 559
- 8.2 Dynamic Analysis of Discrete Systems 561
 - 8.2.1 z -Transform 561
 - 8.2.2 z -Transform Inversion 562
 - 8.2.3 Relationship between s and z 565
 - 8.2.4 Final Value Theorem 566
- 8.3 Design Using Discrete Equivalents 568
 - 8.3.1 Matched Pole–Zero (MPZ) Method 571
 - 8.3.2 Modified Matched Pole–Zero (MMPZ) Method 575
 - 8.3.3 Comparison of Digital Approximation Methods 575
 - 8.3.4 Applicability Limits of the Discrete Equivalent Design Method 576
- 8.4 Hardware Characteristics 577
 - 8.4.1 Analog-to-Digital (A/D) Converters 577
 - 8.4.2 Digital-to-Analog (D/A) Converters 578
 - 8.4.3 Anti-Alias Prefilters 578
 - 8.4.4 The Computer 579
- 8.5 Sample-Rate Selection 580
 - 8.5.1 Tracking Effectiveness 581
 - 8.5.2 Disturbance Rejection 581
 - 8.5.3 Effect of Anti-Alias Prefilter 582
 - 8.5.4 Asynchronous Sampling 583
- △ 8.6 Discrete Design 583
 - 8.6.1 Analysis Tools 583
 - 8.6.2 Feedback Properties 585
 - 8.6.3 Discrete Design Example 586
 - 8.6.4 Discrete Analysis of Designs 588
- 8.7 Historical Perspective 590
 - Summary 591
 - Review Questions 592
 - Problems 593

9 Nonlinear Systems 599

- Perspective on Nonlinear Systems 599
- Chapter Overview 600

9.1	Introduction and Motivation: Why Study Nonlinear Systems?	600
9.2	Analysis by Linearization	602
9.2.1	Linearization by Small-Signal Analysis	603
9.2.2	Linearization by Nonlinear Feedback	608
9.2.3	Linearization by Inverse Nonlinearity	608
9.3	Equivalent Gain Analysis Using the Root Locus	609
9.3.1	Integrator Antiwindup	615
9.4	Equivalent Gain Analysis Using Frequency Response: Describing Functions	619
9.4.1	Stability Analysis Using Describing Functions	625
△ 9.5	Analysis and Design Based on Stability	629
9.5.1	The Phase Plane	630
9.5.2	Lyapunov Stability Analysis	636
9.5.3	The Circle Criterion	642
9.6	Historical Perspective	648
	Summary	649
	Review Questions	650
	Problems	650

10 Control System Design: Principles and Case Studies 660

	A Perspective on Design Principles	660
	Chapter Overview	661
10.1	An Outline of Control Systems Design	662
10.2	Design of a Satellite's Attitude Control	667
10.3	Lateral and Longitudinal Control of a Boeing 747	684
10.3.1	Yaw Damper	689
10.3.2	Altitude-Hold Autopilot	696
10.4	Control of the Fuel–Air Ratio in an Automotive Engine	702
10.5	Control of the Read/Write Head Assembly of a Hard Disk	709
10.6	Control of RTP Systems in Semiconductor Wafer Manufacturing	717
10.7	Chemotaxis or How <i>E. Coli</i> Swims Away from Trouble	731
10.8	Historical Perspective	739
	Summary	741
	Review Questions	742
	Problems	743

Appendix A Laplace Transforms 757

- A.1 The \mathcal{L} -Laplace Transform 757
 - A.1.1 Properties of Laplace Transforms 757
 - A.1.2 Inverse Laplace Transform by Partial-Fraction Expansion 766
 - A.1.3 The Initial Value Theorem 769
 - A.1.4 Final Value Theorem 770

Appendix B Solutions to the Review Questions 772**Appendix C MATLAB Commands 788****Bibliography 793****Index 801**
